

# DIMS Video Enhancement System

## About VideoFOCUS Pro v3.0 DIMS Edition

Instead of creating a bandage of adaptive tools from an entirely different system to make the best of bad video, Salient Stills analyzed the technical problem and the across-the-board needs of law enforcement. They looked at law enforcement's need to turn around information quickly, took into account the fact that most users won't be using the system every day and the understood that many personnel get reassigned quickly. Then they built the best possible video forensics imaging solution there is. Now integrated with DIMS, VideoFOCUS Pro and DIMS provide complete end-to-end chain of custody for video and captured stills.

VideoFOCUS Pro is a complete, end-to-end standalone video and imaging forensic solution for law enforcement personnel to use in the capture, analysis, enhancement, editing and management of analog and digital video evidence. The system has been developed in concert with law enforcement agencies around the world. VideoFOCUS Pro advances users from the capture of video to the output of stills and movies in one straightforward application. The system works with multiplex videotapes to effectively separate out all camera views for further review and enhancement, while making it easy to capture video from proprietary digital video players. VideoFOCUS Pro also ensures all evidence is preserved and all changes are tracked.

In use by over 500 law enforcement agencies, military, and government agencies across the United States, Linear Systems DIMS collects and manages digital photo, audio, and video evidence to simplify the acquisition and archiving of field and lab gathered digital evidence. DIMS provides access security, and logs an audit trail for the chain of custody, while automatically archiving redundant, secure data in a non-proprietary format.
